

CHEMCLAD Solves Difficult Floor Problems for Pennsylvania Manufacturing & Distribution Company

Floor problems are often an ongoing maintenance headache for plant managers. Wear, dust, chemical spills, etc.. are traditional concerns that the maintenance engineer must face.

Conventional floor paints typically provide only short-term solutions. The floors have to be re-coated time and again to keep problems under control.

This Pennsylvania manufacturer, however, opted to try a truly revolutionary approach to floor protection--CHEMCLAD SC from ENECON.

CHEMCLAD systems exhibit phenomenal adhesion to all cementitious substrates. Highlychemically resistant, CHEMCLAD can withstand spills from a wide range of industrial chemicals.

A solvent-free system, CHEMCLAD gives off no hazardous fumes or odors and its wear resistant properties are simply extraordinary!

CHEMCLAD can also be used to create custom tailored non-skid floor surfaces on any floor area.
