

Waste Water Treatment Facility in Tennessee Protects Electrical Cabinets with ENESEAL CR

These electrical cabinets at a sewage treatment plant in Tennessee were severely corroded and needed immediate remedial work. The plant engineers wanted a surface tolerant, corrosion protection coating system with minimal V.O.C. issues.

They contacted their local ENECON Distributor and asked him to recommend a

cost effective and commercially proven solution to their corrosion problems. He immediately suggested **ENESEAL CR** for this application.

After minimal surface preparation utilizing scrapers and then power washing, three coats of **ENESEAL CR** were spray-applied.

Problem solved!
