

Concrete Pedestal Repairs Are as Easy as 1-2-3 With ENECRETE DuraQuartz

ENECRETE DuraQuartz is simply the best concrete repair material available for the really difficult repairs such as on pump pedestals, step nosings, expansion joints, loading dock edges, etc.

The maintenance engineers at this power station have learned to call on their local ENECON field engineering specialist whenever they are presented with a difficult concrete repair project such as on this concrete pedestal.

The repair procedure was very simple...

- 1. The damaged area was cleaned and the substrate was made firm, dry and rough.**
- 2. The damaged surfaces were primed with DuraQuartz surface conditioner which is packed with the ENECRETE system.**
- 3. DuraQuartz is then applied by trowel to completely rebuild the damaged area.**
